

Cognitive Walkthrough Paige

	1. Is the correct action obvious to the user	2. Does the description of the correct action match the user's intent	3. Does the user properly interpret the system's response?	Specific Notes
TASK: Use my recipe program				
Enter ingredients	User did enter things in properly	User's intent was to find something to make	User interpreted enter ingredients meant entering ingredients	User entered "lima bean green beans rabbit mushroom"
Click enter?	User clicked on the okay and continued	Yep	Yep	No issues here
Find top match	User correctly identified the top match	User figured out the top = top match, and what the percentage	See left	

	easily			
Find any other match	User identified another match easily	User interpreted what "percentage meant"	See left	

General Observations:

User was a little intimidated by the system at first when the table popped up, but could navigate it easily

Summary of Recommendations:

User wanted to know if red potato would utilize 'red' 'potato' or 'red potato'. User recommends being able to put in 'red potato'.

User ranks themselves as an 8.5 on computer literacy out of 10.
