Cognitive Walkthrough Steve

	1. Is the correct action obvious to the user	2. Does the description of the correct action match the user's intent	3. Does the user properly interpret the system's response?	Specific Notes
TASK: Use my recipe program				
Enter ingredients	User immediately entered in ingredients properly	User's intent was to find something to make	User interpreted enter ingredients meant entering ingredients	User enter beef, onion powder, pepper
Click enter?	User clicked on the okay and continued	Yep	Yep	No issues here
Find top match	User was a little overwhelmed at first by all	User figured out the top = top match, and what the percentage	See left	

	of the data presented to them.	after a little guidance on the numbers being different		
Find any other match	User identified another match easily	User interpreted what "percentage meant"	See left	

General Observations:
User entered in ingredients in anticipation of finding a recipe they had in mind. In this case, burgers.

Summary of Recommendations:

User expressed approval. User recommended relabing the percentage matched.
